

Pest Management as a Critical Service during a Pandemic.

We would like to remind customers that Public Health Pests carry a number of extremely dangerous diseases including Leptospirosis, Salmonella, E-Coli, Hantavirus etc.

Despite the changes in government guideline, SARS-CoV-2 has been defined as a Biological Agent by the HSE. As such, as an organisation we are duty bound under The Control of Substances Hazardous to Health Regulations 2002 to ensure we mitigate as much as possible the risk of our staff contracting or passing on Covid-19 during their working duties.

As a fully qualified and accredited company we will continue to operate key services responsibly to ensure that Public Health Pests managed while the current covid-19 situation continues.

We will be continuing with pre-visit phone calls, social distancing and mask wearing while at customers sites along with continuing with our Covid-19 Risk-Reducing-Routes.

We ask that you respect our technician's obligation to continue with safe measures so that we may undertake our work safely.

Thank you for your understanding.
